SwachaGraha®

start a green spot

The SwachaGraha campaign is a platform to create a movement, through a collaborative approach between Civil Society organisations(CSOs), Citizens, Organisations, Corporates and the Government to the burgeoning problem of Solid waste.

SwachaGraha is a city wide campaign, seeking to communicate the key tenets of solid waste management, i.e. segregation of waste at source, home composting and responsible waste management. The campaign also seeks to engage stakeholders, highlighting the importance of "No to landfills and growing Safe food", thus leading to sustainable living.

Community Composters

These well-designed composting containers are ideal for apartments, organizations or commercial establishments. Chose a model that suits your waste quantity and space requirements.

Process :
Mix/layer organic waste with browns like dry leaves/microbial cocopeat in a 1:3 ratio. Repeat this process everyday.
Right moisture levels and aeration are the key. Add more browns to handle extra moisture and smell issues. Leave it for 4 to 6 weeks to harvest compost.

Turn 65% of your waste into “Black Gold” within your community.
Let’s contribute to soil health together.

Aaditi

Provider	**Aaditi Stonesoup Solutions Private ltd**
Method	Aerobic
Capacity/day	20 kg
